

Composition	Contains Chlorhexidine Gluconate 4% in a foaming, alcoholic, emollient base.
Actions	Chlorhexidine is an antiseptic and disinfectant which is effective against a wide range of vegetative Gram-positive and Gram-negative bacteria. It is ineffective against acid-fast bacteria, bacterial spores, fungi and viruses. It is more effective against Gram-positive than Gram-negative bacteria, some species of <i>Pseudomonas</i> and <i>Proteus</i> being relatively less susceptible. Chlorhexidine is most active at a neutral or slightly alkaline pH and blood and other organic matter reduce its activity.
Indications	Chlorhexidine Surgical Scrub 4% is indicated for routine hand washing and disinfection prior to surgical or invasive procedures.
Contraindications	Known hypersensitivity to Chlorhexidine.
Precautions	For external use only. Avoid contact with the eyes or ears. Chlorhexidine is incompatible with soaps and other anionic materials. Do not mix with other chemicals or detergents
Adverse Effects	Skin sensitivity to Chlorhexidine has been reported.
Directions for Use	Use undiluted. Wet hands and arms with warm water and dispense one pump (approx. 5mL) to hands and wash for 30 seconds. Clean nails with nail brush. Repeat wash before surgery. Rinse well and dry carefully.
Storage	Store below 30 °C. Protect from light.
Poison Schedule	Not Scheduled.
